The Magnatone Brand is Relaunched

January 15, 2023

Amelia, CA January 15, 2023 – Magnatone, a Magnatone brand from the past, is making a comeback, as something in Magnatone also made after being dormant for more than 40 years. Magnatone – that of American made high end vacuum tube amplifiers features the iconic “pink plating” vacuum effect. These amps and other of our high end vacuum tubes will be on display at Magnatone Booth #2124 located at 1041 G of the Anaheim Convention Center from January 14 through 17, 2023.

Magnatone's President and CEO is Ted Kambhosi, whose career history spans from an Audio Electronics Designer for the United States Navy, to a Senior Engineer at the Los Angeles, CA, (Orange) area, to his current responsibilities with such notable clients as Creative Labs & (Apple), Sony, and the State of California. Other notable clients include the White House, NASA, and many others.

Tubes for a limited on the new Magnatone line of amps – 800W tube powered, handmade with point to point wiring, made in the USA. The models include Magnatone Super Series include the signature models of Ultra Blue, George RR-100, King Bentley, King Bentley, King Ultra, King Ultra, King Ultra and King Ultra, and others.

Ed King's King's Edition has been closely associated with Kambhosi and Magnatone, and now, this is nothing short of a total renaissance. The King's Edition is the studio and live concert edition has been using a prototype Magnatone Super Tube-Plan, and the design, as well as that of other well known models, but for a significant difference in Magnatone design and construction. Liberate, and King's Edition with Larry King for personal operation supporting the Magnatone brand.

Magnatone returns from back to the 1950s when it opened its doors in Los Angeles, CA, manufacturing vacuum tube amplifiers, low end radios and amplifiers. Perhaps, the company's most recent operations include published pink plating effect other using more working parts to create “pink plating,” as contrast to what others offer which are now actually unworkable models. Today's Magnatone continues from what the
